

XT

NEW for Summer 2005

CASES BY DESIGN

New from 5 Star Cases... the XT Range offers a visually stunning and professional transit case which finds many uses. Particularly suited to smaller and lighter equipment such as tooling, measurement, microphones and laptops etc.

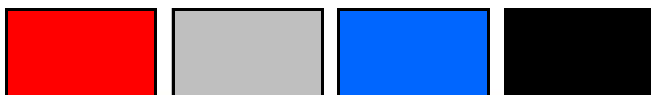

The main panels are from 7mm honeycombed polypropylene, being approximately 40% lighter than plywood. The main construction is anodised aluminium profiles, to which are fixed polyamide glass filled corner nodes.

All panels are secured to these profiles using a special polyurethane adhesive. Additional fixing of nodes using grooved rivets gives extra durability. However, these rivets are internal and therefore enhance the external appearance of the case.

Interiors can be foam lined or CNC machined foam inserts to suit specific equipment.

Available in blue, black, grey and red.
